Subject: Re: Urgent request for data from the Navajo Nation

Bill, I'm happy to help! I think Mike Montgomery is himself also looking for this data to help EPA. I'm copying him here. I will also submit this as a request to the Command tomorrow morning, they are speaking regularly with NNEPA and may be able to jar it loose.

I'm leaving tomorrow night, Clancy will replace me. I'll tee this up for him when we transition tomorrow midday.

Cheers,
LE

Hi Laura!

The State of Utah DEQ Department of Water Quality has been very proactive in both sampling the San Juan River (post Gold King release) and publishing its data online. Just last night the State of Utah dropped its advisory regarding livestock and irrigation with San Juan River water.

One set of data that Utah DWQ would like to access is the historic data from Navajo Nation in the San Juan River. With a larger historic dataset they might be able to tease out the storm effects on their most recent sampling data. I'm told that they have asked Navajo Nation, and they've said they are willing to share it, but Utah hasn't seen the data yet, they believe, because Navajo Nation has been busy with other things this week.

I'm wondering if you or someone else close to the Navajo Nation can assist with this request; I'm guessing that you are getting close to departing, and if so, could you please pass this on to your LNO replacement.

Thank you very much! - Bill
